

HOW CAN I LEARN MORE ABOUT MY WATER?

Additional information can be found by visiting the Water District's website at <http://www.vvwdnv.com>.

If you have any questions regarding water quality or Water District operations, please visit the Water District's office at 500 Riverside Road or call (702) 346-5731. Office hours are from 8:00 a.m. to 4:30 p.m. The Water District Board of Directors meets every 1st and 3rd Tuesday of the month at 5:00 p.m. at the District's office.

LEAD:

Although our water meets all standards, lead if present at elevated levels can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from plumbing fittings and pipelines associated with home plumbing. The Water District is responsible for providing high-quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your drinking water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline (800) 426-4791 or at <http://www.epa.gov/safewater/lead>.

FLUORIDE:

The State of Nevada has set forth a more stringent MCL of 2.0 mg/L for Fluoride than the federal limit of 4.0 mg/L assigned nationally. Some people who drink water containing fluoride in excess of the MCL over many years could get bone disease, including pain and tenderness of the bones. Fluoride in drinking water at half the MCL or more may cause mottling of the teeth of children, usually in children less than nine years old. Mottling, also known as dental fluorosis, may include brown staining and/or pitting of the teeth, and occurs only in developing teeth before they erupt from the gums.

2023 ANNUAL WATER QUALITY REPORT

500 Riverside Road
Mesquite, Nevada 89027

(702) 346-5731

<http://www.vvwdnv.com>

We are pleased to present the 2023 Water Quality Report. This report is designed to inform you about the quality of the water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water at the lowest cost possible. We want you to understand our efforts to continually improve the water treatment process and to protect our water resources. We are committed to ensuring the quality of your water.

NEVADA SOURCE WATER ASSESSMENT SUMMARY SHEET

We treat your water to remove several contaminants and we add disinfectant to protect you against microbial contaminants. The Safe Drinking Water Act (SDWA) requires states to develop a Source Water Assessment (SWA) for each public water supply that treats and distributes raw source water in order to identify potential contamination sources. The state has completed an assessment of our source water. For results of the source water assessment, please contact us.

A copy of the complete source water assessment is available for viewing at the Bureau of Safe Drinking Water (BSDW) Carson City office between the hours of 8:00 a.m. and 5:00 p.m., Monday through Friday. It is suggested that an appointment be made if you are interested in viewing a report. The BSDW office is located at 901 So. Stewart Street, Suite 4001, Carson City, Nevada 89701. Telephone 1-775-687-9520.

WATER SYSTEM CONTACT INFORMATION

WATER SYSTEM NAME: VIRGIN VALLEY WATER DISTRICT	COUNTY: CLARK
BHPS SYSTEM ID NUMBER: NV0000167	NUMBER OF RESIDENTIAL CONNECTIONS: 10,780
GENERAL MANAGER: KEVIN BROWN	ADDRESS: 500 RIVERSIDE RD. MESQUITE, NV 89027
TELEPHONE: (702) 346-5731	FAX: (702) 346-2596
CONTACT PERSON: AARON BUNKER	ADDRESS: 500 RIVERSIDE RD. MESQUITE, NV 89027
TELEPHONE: (702) 346-5731	FAX: (702) 346-2596

FEDERAL AND STATE WATER QUALITY STANDARDS COMPLIANCE

If checked, the above referenced water system is in compliance with all State of Nevada and Federal water quality standards.

WHERE DOES MY WATER COME FROM?

Our water supply currently comes from the hydrologic basin known as Basin 222, the lower Virgin River basin. The Water District draws the water from nine deep wells located throughout the valley, with two additional new wells under construction. Depths of wells range from 640' to 2,020'. The water temperature coming out of the ground is naturally warm at approximately 80 to 90 degrees Fahrenheit.

WHY ARE THERE CONTAMINANTS IN MY DRINKING WATER?

All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water before it's treated include:

Microbial contaminants, such as viruses and bacteria, may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.

Inorganic contaminants, such as salts and metals, can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.

Pesticides and herbicides may come from a variety of sources such as storm water run-off, agriculture, and residential users.

Radioactive contaminants, can be naturally occurring or the result of mining activity

Organic contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, may also come from gas stations, urban storm water run-off, and septic systems.

The Water District routinely monitors for contaminants in our drinking water in accordance with State and Federal laws.

More information about contaminants and potential health effects can be obtained by calling the EPA hotline at 1-800-426-4791.

DETECTED CONTAMINANTS

The following table summarizes results of detected contaminants during the 2023 monitoring period. It is important to remember that the presence of these contaminants does not necessarily pose a health risk. The table analyzes the concentration of contaminants in your water in relation to the Maximum Contaminant Level (MCL). All contaminants were well below the MCL.

A copy of all test results is available upon request at the Water District office.

REGULATED CONTAMINANTS	MONITORING PERIOD	UNIT	YOUR WATER	RANGE	MCL	MCLG	TYPICAL SOURCE
*Arsenic	2023	ppb	*4.8	ND-9.7	10	0	Erosion of natural deposits.
Barium	2023	ppm	0.052	0.0-0.052	2	2	Discharge of drilling wastes; Erosion of natural deposits
Fluoride	2023	ppm	1.5	ND-1.5	2	4	Erosion of natural deposits; Discharge from fertilizer.
Nitrate	2023	ppm	1.4	ND-1.4	10	10	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits.
Chromium	2023	ppb	12.0	ND-12.0	100	100	Erosion of natural deposits.
DISINFECTION BY-PRODUCTS	MONITORING PERIOD	UNIT	YOUR WATER	RANGE	MCL	MCLG	TYPICAL SOURCE
*HAA5	2023	ppb	*0	0	60	0	By-product of drinking water chlorination.
*TTHM	2023	ppb	*2.95	2.82-3.08	80	n/a	By-product of drinking water chlorination.
LEAD & COPPER	MONITORING PERIOD	UNIT	90 th PERCENTILE		RANGE	AL	TYPICAL SOURCE
Lead	2021	ppb	1.6		ND-2.7	15	Corrosion of household plumbing systems. Erosion of natural deposits.
Copper	2021	ppm	0.2		ND-0.39	1.3	Corrosion of household plumbing systems. Erosion of natural deposits.
Radionuclides	MONITORING PERIOD	UNIT	HIGHEST VALUE	RANGE	MCL	MCLG	TYPICAL SOURCE
Gross Alpha	2022	pCi/L	11.3	4.3-11.3	15	0	Erosion of natural deposits.
Gross Beta	2022	pCi/L	10.1	6.2-10.1	50	0	Erosion of natural deposits.
Combined Uranium	2022	µg/L	6.2	2.5-13.0	30	0	Erosion of natural deposits.
Radon	2022	pCi/L	635.4	163-635.4	n/a	n/a	Naturally occurring gas.
SECONDARY CONTAMINANTS	MONITORING PERIOD	UNIT	HIGHEST VALUE	RANGE	MCL	MCLG	TYPICAL SOURCE
Calcium	2023	mg/L	55	30-55	n/a		Erosion of natural deposits.
Chloride	2023	mg/L	170	20-170	400	n/a	Erosion of natural deposits.
Hardness	2023	mg/L	270	140-270	n/a		Erosion of natural deposits.
Magnesium	2023	mg/L	33	16-33	150	n/a	Erosion of natural deposits.
Sodium	2023	mg/L	140	39-140	200	20	Erosion of natural deposits.
Sulfate	2023	mg/L	260	99-260	500	n/a	Erosion of natural deposits.
TDS	2023	mg/L	610	260-610	1000	n/a	Erosion of natural deposits.
**Odor	2023	TON	6	0-6	3	n/a	Naturally present in the environment.

*Your Water (Arsenic & TTHM): The annual average of contaminant during the monitoring period.

**Odor was high at one of the District's nine wells during the month of June. No actions were required. Follow up sample came back at 0 TON.

IMPORTANT DRINKING WATER DEFINITIONS

MCLG (Maximum Contaminant Level Goal)—The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLG's allow for a margin of safety.

MCL (Maximum Contaminant Level)—The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to MCLG's as feasible using the best available treatment technology.

AL (Action Level)—The concentration of a contaminant, which if exceeded, triggers treatment or other corrective action to mitigate the contaminant.

ND (Non-Detect) —The concentration of a specific contaminant is below the detection limits of the EPA's accepted monitoring method.

ppm (parts per million) / mg/L (milligrams per Liter)—one ppm compares to one minute in two years or a single penny in \$10,000.

ppb (parts per billion) / µg/L (micrograms per Liter)—one ppb compares to one minute in 2,000 years, or a single penny in \$10,000,000.

pC/L (picocuries per Liter)—A picocurie is one-trillionth of a curie, which is a unit of measure used to express the results of radioactivity.

RADON:

Radon is a naturally occurring gas present in some groundwater. Inhaled radon has been linked to lung cancer and may pose a health risk when inhaled after the release from water into air. This inhalation could occur during showering, bathing, washing clothes. The Radon gas release from drinking water is relatively small part of total radon. It is not clear whether ingesting (i.e. taken through the mouth) radon contributes to cancer or other adverse health conditions. If you are concerned about radon in your home, tests are available to determine the total exposure level. For additional information on home testing contact the Southern Nevada Health District.

DISINFECTION:

The District uses Sodium Hypochlorite (common household name is Bleach) for disinfection of the treated finished water and to maintain a Chlorine residual throughout the distribution system between 0.40 – 0.95 mg/L.

WHAT OTHER INFORMATION CAN YOU GIVE ME ABOUT MY WATER?

pH — 7.45-8.06	Iron — ND mg/L
Fluoride — 0.0-1.5 mg/L	Hardness — 9-16 grains/gallon
Sodium — 39-140 mg/L	Hardness — 140 -270 mg/L
Calcium — 30-55 mg/L	Specific Conductance — 600-1,200 µS/cm
Magnesium — 16-33 mg/L	Total Dissolved Solids — 260-610 mg/L
Silica — 18-38 mg/L	Temp. of well water — Approx. 80-90°F
Sulfate — 99-260 mg/L	Chlorine Residual — 0.40-0.95 mg/L

Each water source is tested quarterly, annually, or once every three years depending on the constituent for over 130 different contaminants as required by State and Federal agencies. Results of those tests can be obtained at the Water District's website at vvh2o.com or contacting the Water District at 702-346-5731.

ARSENIC:

While your drinking water meets EPA's standard for arsenic, it does contain very low levels of arsenic. EPA's standard balances the current understanding of arsenic's possible health effects against the costs of removing arsenic from drinking water. EPA continues to research the health effects of low levels of arsenic which is a mineral known to cause cancer in humans at high concentrations and is linked to other health effects such as skin damage and circulatory problems.

ARSENIC TREATMENT PLANTS:

The District has six arsenic treatment plants throughout the distribution system and a seventh arsenic treatment plant is currently being engineered and is scheduled to be online in 2025. The treatment plants are state of the art facilities that can remove the natural occurring arsenic in our ground water to very low levels, and in some instances non-detect levels. The District and its staff are dedicated to providing the highest quality of dependable drinking water.

DO I NEED TO TAKE SPECIAL PRECAUTIONS?

Some people may be more vulnerable to contaminants in drinking water than the general population. Immunocompromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk for infections. These people should seek advice about drinking water from their health care provider. EPA/Center for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (800) 426-4791.
